

Two New CEE HydroSystems Distributors in Southeastern USA

CEE HydroSystems added two new distributors supporting hydrographic customers in the Southeastern USA. Based in Lakeland, Florida, Measutronics are an established Trimble Marine dealer and Service Center and are active selling GNSS positioning, advanced LiDAR and multibeam echo sounder packages to the marine construction and hydrographic survey industries. Aqua-Tech Services of Broussard, Louisiana supply rental equipment to the offshore oil and gas and hydrographic industries, and represent several manufacturers including Hemisphere GNSS.

Both companies have significant expertise in shallow water surveying, with experience using current and previous-generation equipment making them well placed to promote the advantages of modern SBES solutions from CEE HydroSystems. CEE are delighted to be working with these new respected partners and look forward to future hydrographic survey projects in Florida, Georgia, Mississippi, Alabama, Texas, Louisiana and beyond.
